

# Announcement

4/2/11

## 1. Help for HW#4

- A help file for HW#4 is available online. It can be accessed via:

**[http://www.cse.fau.edu/~sam/course/intro\\_ic/hw/help4HW4.pdf](http://www.cse.fau.edu/~sam/course/intro_ic/hw/help4HW4.pdf)**

- An example implementation for HW#4 is partially coded. One may invoke the following PHP program to give it a try:

**<http://lamp.cse.fau.edu/~samh/demo/webSurvey.php>**

- All relevant files for the example implementation can be found in the following directory:

**[http://www.cse.fau.edu/~sam/course/intro\\_ic/hw4Ex\\_dir/](http://www.cse.fau.edu/~sam/course/intro_ic/hw4Ex_dir/)**

## 2. More on the example implementation

- There are three PHP files in the example directory:

**`webSurvey.php`, `webSurveySer.php`, `recaptchlib.php`**

Note: For successful downloading purpose, all **.php** files are renamed **.txt**. You need to change the filename extension for the PHP files back to **.php** after downloads.

- You may need to pay attention to the permissions on these PHP files and on the directory in which those files reside for your PHP programs to work correctly:

```
chmod 604 *php  
chmod 707 phpDirectoryName
```

- ## 3. Your HW#4 has been slightly modified to incorporate primarily the new naming requirements regarding the PHP files, and the retry intervals. Please re-read your HW#4 specification online and make sure you follow the new requirements correctly.
