Announcement
11/21/10

1. Project runtests

   - It is about time to schedule a runtest time for your term project. All runtests will be held in EE 410B. I will have a Windows/XP system with network connection ready for your runtest. Also, you may bring your own machine if so desired.

   - Please email me soon with the subject line "CNT 5715 Project Runtest", to setup a runtest time for you. The following times are good for me:

     i)   11/29/10, Monday, from 9:30am-12:30noon, 1:30pm-5:00pm.
     ii) 11/30/10, Tuesday, from 2:30pm-6:00pm.
     iii) 12/1/10, Wednesday, from 2:00pm-6:00pm.
     iv) Other times are possible, if none of the above is good for you.

   - You may specify your preferred time in a one-hour interval, such as 2:00pm-3:00pm, etc. Please also indicate your second or even third choice, if your most favored time slot can not be allocated due to multiple requests for the same time(s).

   - For those who really can not make a trip to Boca campus to do your runtest due to distance reason or other justifiable reason, you must detail how to compile and run your project in your readme.txt file. Also you must include some sample runs to show how it works. However, it is strongly recommended that you can be present for your run-test to avoid any possible confusion in grading due to incomplete documentation of your project.

   - Each run test will be around 30 minutes. No project will be graded without a successful runtest.

2. Project report

   - Your project report, plus your source code, is due November 28, 2010, before 11:30 pm.
